

BID-001-Q06 Vendor RFQ Response

Vendor Quote: BID-001-Q06

Vendor: ApexCura Imaging Systems (Premium integrated MRI and AI diagnostics supplier)

Legal Entity: ApexCura Imaging Systems Private Limited

Registered Address: 402 Medical Technology Park, Bengaluru, India

Contact: Dr. Meera Shah, rfq-response@apexcura.example, +91-98765-21045

Company Profile: 18 years in operation, 52 similar hospital MRI installations, local service offices in Mumbai, Pune, Bengaluru, Delhi, and Hyderabad.

Procurement: MRI System - MRI Machine

Commercial Offer: INR 18.90 Cr total package price. This is higher than the base budget because it includes AI-based organ coloring, AI-based infected tissue detection support, scan calibration/focus control, installation, commissioning, and a five-year uptime-backed service plan. A negotiation discount of INR 0.20 Cr is offered if the buyer confirms AI-based organ coloring and infection-detection workflow as accepted RFQ value items during technical negotiation.

Advance Payment and Security: 10% advance payment against bank guarantee. 20% on delivery to site, 40% after installation and commissioning, 20% after acceptance testing, and 10% retention released after 90 days of successful operation.

Delivery and Warranty: Delivery in 4.0 months. Warranty starts on commissioning and buyer acceptance, not delivery. Full warranty duration is 36 months after acceptance.

Installation Responsibility: Vendor owns delivery coordination, installation, commissioning, calibration, acceptance testing, and handover. Buyer dependencies are limited to civil readiness, power availability, and site access dates agreed in the installation plan.

Clinical Capability: Includes core MRI imaging capability, scan calibration/focus control, patient throughput workflow, AI-based organ coloring/marketing, AI-based infected tissue detection assistance, artifact flagging, and radiology workflow export. AI outputs are decision support only and must remain under doctor review.

Training and Handover: Training included for radiologists, MRI technicians, biomedical engineers, and administrators. Includes five onsite sessions, competency checklist, completion certificates, operating SOPs, preventive maintenance handover, and emergency escalation workflow.

Service Support: 12-hour response target, 48-hour resolution target for critical failures, 98% uptime commitment excluding force majeure and buyer-caused downtime, local service team, spare-parts buffer in India, quarterly preventive maintenance, escalation matrix, and service-credit remedy for missed SLA.

Compliance Claims: IEC 60601, ISO 13485, local regulatory approval, cybersecurity hardening note, DICOM workflow support, audit logs for AI module usage, and validation documentation available during technical evaluation.

Acceptance Criteria: Site acceptance test, image-quality phantom test, commissioning report, AI workflow demonstration, uptime monitoring setup, training

completion evidence, and signed buyer acceptance are required before final payment milestone.

RFQ Requirement Coverage Statement: The vendor confirms coverage of high-value doctor requirements for MRI function, scan focus control, AI organ coloring, AI infected tissue detection, and patient workflow; biomedical engineering requirements for installation, commissioning, SLA, spares, maintenance, training, and handover; finance requirements for payment milestones, TCO visibility, AMC/CMC separation, and software subscription disclosure; procurement requirements for measurable delivery, warranty, vendor obligations, and comparable quote format.

Commercial Note: The quoted price is deliberately not the lowest offer. The vendor believes the added clinical AI features, commissioning-linked warranty, secured payment structure, and enforceable service plan provide higher buyer value and lower execution risk.
